

I'm not robot

Continue

Started working on this yesterday after finding another fillable PDF. I had enough problems with it that I decided to fix them. While I was busy, I decided to add automatic calculations for almost anything it's reasonable to calculate automatically./ u/FatMani has also been working on versions of this sheet that add extra fixes and tweaks to fit its flavor (or just fix my screw-ups :P). Automatically calculated statistics:Base Ability ModifiersAll Proficiency ModifiersClass DC (excluding Key Ability Mod)Perception ModAll Saving ThrowsAll SkillsACAttack Roll Mod (except Ability Mod)EncumbranceBulkMultiple light bulk items can be indicated by #L in the bulk column. (Shoutout to/you/FatMani for coming up with this) Spell Attack and DC (excluding Key Ability Mod) There are a few things that can be added to automatically calculate more fields (such as key ability modifiers), but I didn't want to add form controls for things that weren't present in the base sheet. Problems: Some calculations (especially bulk) are slow and have noticeable delay (though not much). Specifying multiple bulk items requires (some think) weird formatting in the bulk column. A correct amount of column would fix thisSome fields may still have some weird formatting. TODO:Add selector for key ability so that it can be completed automaticallyEFigure from why Acrobat adds a phantom field called ARCANA ABILITY13 on page -1, which is a copy of an old version of the actual Arcana skill field (which throws JavaScript errors). This problem disappears if there is a field on the sheet with that name already. Yes, that means that there is currently a hidden, read-only field on the page called 'ARCANA ABILITY13' capable of this error in Acrobat.Changelog:2019-08-05Fixed Spell DC does not add 10Added printer friendly versionVested bugs in skill calculations for the second Lore, Stealth, and Society.Fixed ability modifier calculation for values less than 10.2019-08-06Severymonly fixed Society this time ... Combined the Color and Printer Friendly VersionsToggle State with a button on the first page (top right). Cleaned-up calculation scriptsLayerstatus has now been restored when opening the document.2019-08-07Fixed printer-friendly layer in AcrobatFixed contains numerous JavaScript errors in AcrobatUpdated taborder of the first page. It's still not the best (you have to tab through check boxes eventually), but it's much better than it was. Fixed ability modifier calculations in AcrobatApparently, numbers more than 9 and less than 0 do not count as numbers for Adobe.2019-08-08Added fixes to bring my magazine and FatMani's sheets more in line:Size is now a dropdownFix bulk calculation in AcrobatAdd support for multiple light items using the format #L # the number of light items to add. Centered text in the Hero Points and Speed fields Attached to larger input fields under Personality and Campaign Notes Formatting on description fields under Actions and Activities activities Free Actions and ReactionsInnate Spells zijn nu links uitgelijnd als de andere spreuk slots2019-08-09Fixed Fortitude mod wordt berekend in de verkeerde volgordePage 2 61 opmerkingen Georganiseerd Google Sheets met Info over alternatieve karakter bladen
